

OMNI 3750

Ethernet and Dial Module

The Fastest Terminal on the Market.

THE VERIFONE OMNI 3750 is the first POS terminal to offer the speed and flexibility of Ethernet-based payment services, completing transactions in as little as four seconds. If you already have broadband service such as DSL or cable, you can immediately begin processing payments over a lightning-fast, always-on connection. Or you can start by using the dial-up capability that's also built in and upgrade to Ethernet when you're ready, without swapping out your terminal.

Plus, if you have multiple terminals or other Internet-connected devices, you can connect them all through one link, eliminating the need for multiple phone lines. And that's not all. The VeriFone Omni 3750 supports value-added services such as gift cards, prepaid phone cards, check services, and time and attendance processing to give you more bang for the buck. The Omni 3750 is versatile, powerful and future-proof—trust VeriFone to support your needs today and tomorrow.

OMNI 3750

Ethernet and Dial Module

FEATURES & BENEFITS

Extraordinary Ease of Use

- The plug-and-play terminal is simple to install and even simpler to use. If you've already got a high-speed service, you're ready to go.
- Intuitive ATM-style interface, backlit display, large keys, and easy-to-read menu prompts reduce training and minimize clerk errors.
- Ethernet and dial-up capabilities are built into the same device, with no attachments required. Easily switch between Ethernet and dial-up—using a high-speed connection for some tasks and dial-up for others.
- All-in-one design includes integrated thermal printer with "clam shell" design for drop-in paper-loading, to virtually eliminate jams. A flashing LED alerts clerks to low-paper levels.
- Compact, stylish profile conserves counter space and is ergonomically designed so that the terminal can be easily handed to customers for PIN entry.

Unmatched Power, Flexibility, and Security

- Trim transaction times to as little as 4 seconds.
- Fast, quiet printer, and powerful processor chip help speed customers through lines.
- Advanced communications module supports traditional dial-up, plus Ethernet connections for using DSL, cable, and other high-speed, IP-based communications technologies.
- Display and print logos, graphical fonts, and character-based languages.
- File compression, used in conjunction with high-speed networks or high-speed modems, greatly streamlines application downloads.
- Works with a full line of peripherals, so that you can add capabilities, such as check conversion, as your needs expand.
- Sophisticated file authentication, SSL encryption, and other security features safeguard your transactions and terminals.

Support for Payment and Value-Added Applications

- The terminal supports value-added solutions such as gift card, loyalty, electronic check, stored value, and age verification—for enhanced customer service and increased revenue.
- An internal PINpad supports PIN-based debit and EBT transactions.

The Omni 3750 terminal — featuring both Ethernet-based and dial-up communications in a single hardware module — delivers high-speed transaction processing in an easy-to-use, versatile, all-in-one design.

A "clam shell" printer facilitates drop-in paper loading, virtually eliminating paper jams.
